---

Most areas in the hospital are using mixing ventilation, which dilutes airborne virus particles and bacteria. However, the mixing of air does not control how the air is moving! Viruses and bacteria will inevitably whirl around in the room and may end up being inhaled or deposit into wounds, which can lead to infections. [Is your hospital safe enough?](#)

**„Airborne transmission of SARS-CoV-2 is significant and should be controlled. Changes to building operations, including the operation of heating, ventilating, and air-conditioning systems, can reduce airborne exposures.“**

- ASHRAE Epidemic Task Force

---

**Dr. Jon Edman Wallér**, Resident physician in Clinical microbiology and infection control, wrote an article about how diseases are transmitted through the air, and how discussions have taken place over the past 2000 years. This is something that we at Avidicare noticed and wanted to know more about. [Read the article in our blog.](#)

---

**New partnership Italy!** We are very pleased to announce our new partnership in Italy. Together with **Medical Lab System (MLS)** we will introduce Opragon to Italian hospitals and healthcare facilities. [Read the full statement here.](#)

**Kathy Warye**, CEO at Infection Prevention Partners took the opportunity to ask **Remko Noor, MSc.** Chief Technology Officer at Maximuse B.V. about his experience with Temperature-controlled Air Flow (TcAF) technology inside operating theaters. [Read the full interview in our blog.](#)
